Should Fix:

## Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- <http://blogsbar.com/wp-content/plugins/host-analyticsjs-local/cache/local-ga.js> (expiration not specified)

### Consider Fixing:

## Minify CSS

## Mobile

Compacting CSS code can save many bytes of data and speed up download and parse times.

[Minify CSS](#) for the following resources to reduce their size by 402B (17% reduction).

- Minifying <http://secure.gravatar.com/css/hovercard.css?ver=201832> could save 234B (13% reduction) after compression.
- Minifying <http://blogsbar.com/wp-content/plugins/jetpack/modules/widgets/social-icons/social-icons.css> could save 168B (30% reduction) after compression.

## Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

[Minify JavaScript](#) for the following resources to reduce their size by 964B (20% reduction).

- Minifying [http://blogsbar.com/wp-content/plugins/jetpack/\\_inc/build/postmessage.min.js](http://blogsbar.com/wp-content/plugins/jetpack/_inc/build/postmessage.min.js) could save 749B (20% reduction) after compression.
- Minifying [http://blogsbar.com/wp-content/plugins/jetpack/\\_inc/build/jquery.jetpack-resize.min.js](http://blogsbar.com/wp-content/plugins/jetpack/_inc/build/jquery.jetpack-resize.min.js) could save 215B (20% reduction) after compression.

## Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 1 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Optimize CSS Delivery](#) of the following:

- <http://blogsbar.com/wp-includes/css/dashicons.min.css>

## Optimize images

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 37.8KiB (15% reduction).

- Compressing <https://i0.wp.com/blogsbar.com/wp-content/uploads/2018/03/Patek-Philippe-Sky-Moon-Tourbillon.jpg?w=946> could save 21.1KiB (14% reduction).
- Compressing <https://i0.wp.com/blogsbar.com/wp-content/uploads/2018/03/alaxender-blogsbar.jpg?w=960> could save 16.8KiB (17% reduction).

### Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target `<a href="http://blogsba...entertainment/">Entertainment</a>` and 23 others are close to other tap targets final.
- The tap target `<a href="http://blogsba...estyle/people/">People</a>` and 28 others are close to other tap targets final.
- The tap target `<a href="http://blogsbar.com/home/" class="bb-badge badge trending">Trending</a>` and 1 others are close to other tap targets.
