Should Fix:

Avoid landing page redirects

Your page has 2 redirects. Redirects introduce additional delays before the page can be loaded.

[Avoid landing page redirects](#) for the following chain of redirected URLs.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Mobile

Your page has 1 blocking script resources and 4 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Remove render-blocking JavaScript](#):

🔸 Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- https://ton.twimg.com/tfw/css/syndication_bundle_v1_0f800c4c60206a3994a34989ef109e9eba493ffa.css (60 seconds)

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 3% of the final above-the-fold content could be rendered with the full HTML response.

- Click to see the screenshot with only the HTML response: snapshot:2

94 / 100 User Experience

⚠️ Consider Fixing:

Size content to viewport

The page content is too wide for the viewport, forcing the user to scroll horizontally. Size the page content to the viewport to provide a better user experience.

The page content is 789 CSS pixels wide, but the viewport is only 412 CSS pixels wide. The following elements fall outside the viewport:

- The element <iframe id="aswift_3" name="aswift_3" class="lazyloaded"> falls outside the viewport.

- The element <iframe id="aswift_4" name="aswift_4"> falls outside the viewport.

- The element <iframe id="aswift_5" name="aswift_5"> falls outside the viewport.

- The element <iframe id="aswift_6" name="aswift_6"> falls outside the viewport.

- The element <iframe id="aswift_2" name="aswift_2"> falls outside the viewport.

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a

Mobile

touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target <div id="vce-main">HomeAbout UsWr...iersContact Us</div> is close to 1 other tap targets final.

- The tap target Event and 15 others are close to other tap targets final.

- The tap target is close to 1 other tap targets final.

- The tap target Meet the compa...miss this one. is close to 1 other tap targets.

- The tap target Add Comment and 17 others are close to other tap targets.

- The tap target is close to 1 other tap targets.

- The tap target We supply new...rking reliably is close to 1 other tap targets.

- The tap target is close to 1 other tap targets.

- The tap target Find Out Which...Dividend Here. is close to 1 other tap targets.
